

Ethereum Grant — ERC-8232

Budget Request

Applicant

Zen (@neonmercenary) — Author & Maintainer (pseudonymous)

Full-time focus on spec refinement, reference implementation, and ecosystem integration.

Budget Request (USD/DAI)

\$35,000

Budget Breakdown

- Spec refinement & legal/compliance review: \$8,000
- Reference implementation hardening + test coverage expansion: \$12,000
- Testnet deployment scripts + integration examples (ERC-8183, ERC-3643, RAMS): \$7,000
- Documentation, tutorials & community workshops: \$5,000
- Contingency / minor audit prep: \$3,000

Timeline & Milestones (8–10 weeks)

- Week 1–2: Finalize spec based on ERC review feedback + RAMS composition notes
- Week 3–4: Expand test suite (fuzz tests, invariant checks, multi-chain deploy scripts)
- Week 5–6: Publish integration guides (ERC-8183 jobs, ERC-3643 compliance hooks)
- Week 7–8: Host 2 community workshops + draft Last Call PR
- Week 9–10: Address feedback, finalize reference implementation, prepare for Final status

Key Deliverables

1. Updated ERC-8232 specification (v0.2 → v0.3)
2. Production-ready Vyper reference implementation (registry + vault patterns)
3. Comprehensive test suite + coverage report
4. Deployment scripts (Base Sepolia, Mantle Sepolia)
5. Integration examples (ERC-8183 job workflow, ERC-3643 compliance hook)
6. Documentation site / tutorial repo
7. Public Last Call proposal submission
8. Zerodegree — A2A autonomous procurement for AI utilizing ERPs (Top #400 selected for Avalanche Build Games '26)
9. [Settled.sbs](#) — scoped settlement layer for agents

Why This Benefits Ethereum

ERC-8232 enables compliant, auditable autonomous management of tokenized real-world assets, a primitive required for institutional adoption of agentic finance. It is fully open-source (MIT), composable with existing Ethereum standards, and designed to reduce fragmentation by explicitly aligning with ERC-8226 (RAMS) and ERC-8183. Funding accelerates a public-good standard that unlocks safe agent-RWA commerce, treasury automation, and regulatory-compliant DeFi workflows.
